

INNOVATIVE DEPENDABLE EFFECTIVE

DISCOVER OUR NATURAL INGREDIENT SOLUTIONS FOR DAIRY CATTLE APPLICATIONS

Producers have long strived to provide economical feeds and nutrition for their livestock. However, there is much more to it than providing cheap feed. There has to be awareness of the animal's requirements and what is necessary to promote cost-effective reproduction, health and growth. Also, it is helpful to understand that challenges such as stress or parasites must also be addressed.

In today's high-cost protein and forage markets, it is critical for the animal to efficiently extract every bit of nutrient possible to meet protein, energy, mineral and vitamin requirements.

York Ag provides an extensive ingredient portfolio that is proven to improve dairy cattle productivity and efficiency by reinforcing nutrition. Our products help insure each mouthful delivers the highest degree of nutrients possible to maximize health and performance.

BOVAZYME® and **BOVAZYME® Organic** are proprietary feed enzyme additives that help maximize efficiency by helping the animal access as many nutrients as possible. They also aid in reduction or prevention of digestive upset and maintenance of normal rumen function. Optimal efficiency and animal health always help the bottom line – especially when faced with challenging economic and environmental conditions.

York Ag also distributes yeast-based additives such as **RYeast40®**, a natural product offering excellent nutrition for the rumen flora. Yeasts play a variety of roles in the dairy cattle digestive tract working in both the rumen and in the intestinal tract. Furthermore, York Ag is an authorized distributor of **KENDER Bio Tech**, a U.S.- based company with more than 30 years of experience in essential oil and botanical based ruminant feed additives.

PRODUCT

DESCRIPTION

Available in conventional and organic versions, BOVAZYME® is a proprietary feed enzyme additive for beef cattle that includes 7 food-grade enzymes that help break down less accessible nutrients to make them more readily available for further microbial action. Ultimately, BOVAZYME® helps enhance microbial growth and microbial protein utilization while supporting nutrient digestion naturally.

A unique yeast-based additive for the rumen flora. Not all yeast is created equal. In the rumen, the contents of the yeast cell help stimulate growth and activity of the microbial population to enhance feed and forage digestion. The yeast cell wall components of RYeast40® are proven to stimulate intestinal health, bind pathogens, and mitigate the negative effects of mycotoxins.

A botanical-based additive made of essential oils that help increase dairy cattle's capacity to overcome stress and improve reproduction, growth, and health.

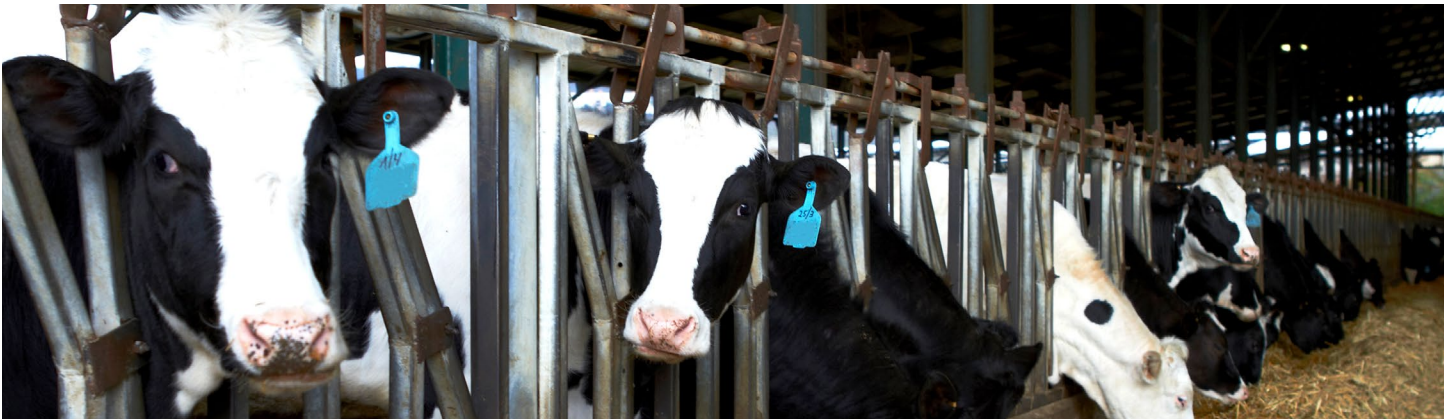

A botanical-based additive that blends essential oils and spices (BEOS) used as a natural alternative to Monensin in dairy applications.

A natural blend of spices for ruminant feeds to help reduce body temperatures and mitigate heat stress in cattle.

A natural and safe tool to decrease the number of flies and other performance draining insects on cattle and other farm species.
