News Release

York Ag Exhibits at 2022 Texas A&M Beef Cattle Short Course

York Ag will showcase its natural ingredients portfolio for beef cattle applications at this event organized by the Department of Animal Science at Texas A&M University.

(York, Pa., July 27, 2022) York Ag, a dynamic supplier of holistic ingredient solutions that optimize animal well-being, will exhibit at the 2022 Texas A&M Beef Cattle Short Course in College Station, TX (August 1-3, 2022, Rudder Tower - 401 Joe Routh Blvd, College Station, TX 77843).

Dating as far back as 1942, the Beef Cattle Short Courses were held on the campus of Texas A&M College to discuss the results of beef cattle research from the Texas Agricultural Experiment Station with Texas beef producers. Today, the highly respected TAM Beef Cattle Short Course is nationally and internationally recognized as one of the largest beef cattle educational programs of its type in the world. Topics include animal health, nutrition, reproduction, breeding, genetics, selection, research, marketing, and handling. Management sessions will cover business, forage, range, and purebred cattle.

York Ag has more than 40 years of experience supporting feed manufacturers, livestock consultants, and animal producers. Its beef ingredients portfolio includes natural alternatives to address the main challenges experienced in a beef cattle operation. "Our goal is to bring innovative, dependable, effective additives and ingredients that help producers improve performance and profitability", said Bill Achor, President and CEO of York Ag.

York Ag believes Everyone Deserves a Nutritious Meal®. Its proprietary products, BOVAZYME® and BOVAZYME® Organic are feed enzyme additives that aid in digestion and help mitigate bloating events in beef cattle.

In addition to BOVAZYME®, York Ag, also distributes yeast-based additives such as RYeast40®, a natural product offering excellent nutrition for the rumen flora. Yeasts play a variety of roles in the cattle digestive tract working in both the rumen and in the intestinal tract. In the rumen, the contents of the yeast cell help stimulate growth and activity of the microbial population to enhance feed and forage digestion.

Furthermore, York Ag is an authorized distributor of KENDER Bio Tech, a U.S.- based company with more than 30 years of experience in ruminant feed additives. From KENDER® Beef 101/102 to KENDER® Organic 301/302, and KENDER® Fly Shield, York Ag offers a precise set of solutions for beef cattle applications.
