

INNOVATIVE DEPENDABLE EFFECTIVE

DISCOVER OUR NATURAL INGREDIENT SOLUTIONS FOR BEEF & DAIRY CATTLE APPLICATIONS

Producers have long strived to provide economical feeds and nutrition for their livestock. However, there is much more to it than providing cheap feed. There has to be awareness of the animal's requirements and what is necessary to promote cost-effective reproduction, health and growth. Also, it is helpful to understand that challenges such as stress or parasites must also be addressed.

In today's high-cost protein and forage markets, it is critical for the animal to efficiently extract every bit of nutrient possible to meet protein, energy, mineral and vitamin requirements.

York Ag provides an extensive ingredient portfolio that is proven to improve cattle productivity and efficiency by reinforcing nutrition. Our products help insure each mouthful delivers the highest degree of nutrients possible to maximize health and performance.

BOVAZYME® and **BOVAZYME® Organic** are proprietary feed enzyme additives that help maximize efficiency by helping the animal access as many nutrients as possible. They also aid in reduction or prevention of digestive upset and maintenance of normal rumen function. Optimal efficiency and animal health always help the bottom line – especially when faced with challenging economic and environmental conditions.

York Ag also distributes yeast-based additives such as **RYeast40®**, **Hilyses®**, and **IMW50®**, which provide excellent nutritional support for rumen flora. Yeasts play a variety of roles in the cattle digestive tract working in both the rumen and in the intestinal tract. Furthermore, York Ag is an authorized distributor of **Probiotech International**, a North American company with more than 25 years of experience in essential oil and botanical based ruminant feed additives.

PRODUCT DESCRIPTION

BOVAZYME®

BOVAZYME®
ORGANIC

BOVAZYME® is a proprietary feed enzyme additive for beef cattle that includes 7 food-grade enzymes that help break down less accessible nutrients to make them more readily available for further microbial action. Ultimately, **BOVAZYME®** helps enhance microbial growth and microbial protein utilization while supporting nutrient digestion naturally. Available in conventional and organic versions.

RYeast 40®

Hilyses® 
The Bionic Prebiotic

IMW50®

RYeast40®, **Hilyses®**, and **IMW50®** provide natural, science-based nutrition to improve animal health and performance. **RYeast40®** supports rumen function and productivity with inactivated yeast and functional metabolites, while **Hilyses®** enhances hind gut health and immunity through hydrolyzed yeast nutrients, including free nucleotides, β -glucans, and MOS. **IMW50®** complements these benefits by combining the most concentrated level of β -glucans, and MOS in the commercial space. This promotes intestinal integrity, enhanced immune function, and consistent performance, helping producers optimize animal well-being and production efficiency. Approved for use in organic production.

PHYTOZEN® 250

PHYTOZEN® OP

PHYTOZEN® 250 is a botanical-based additive made of essential oils that help increase beef and dairy cattle's capacity to overcome stress and improve reproduction, growth, and health. **PHYTOZEN® OP** approved for use in organic production.

ALTERNA® R

ALTERNA® R OP

ALTERNA® R is a natural rumen modifier alternative to Monensin in beef and dairy applications. **ALTERNA® R OP** approved for use in organic production.

FLYSHIELD

FLYSHIELD OP

FLYSHIELD is a natural blend of botanicals that decrease the number of flies and other performance draining insects on cattle and other ruminant species by releasing repellent aromatic compounds. Available in liquid formulation. **FLYSHIELD OP** and **FLYSHIELD OP Liquid** are approved for organic production.
